Here's a **simple, repeatable daily routine (10–15 mins)** to lock these into muscle memory:

🔁 Daily Routine (do this every coding session)

1. 🔥 Warm-up (2 mins)

Open any file and **force yourself to use shortcuts only** (no mouse):

- ⇧ ⇧ → search a class
- ⌘ ⌥ ← / → → move back & forward
- ⇧ ^ R → run something

👉 Goal: "navigation mindset"

---

2. ✍️ Editing drill (5 mins)

Create a small dummy class and repeat this flow **every day**:

1. Type a simple class
2. ⌘ N → generate constructor
3. ⌥ ⏎ → fix/import something
4. ⌘ / → comment/uncomment
5. ⌘ D → duplicate lines
6. ⌥ ⇧ ↑/↓ → move lines
7. ⌘ ⌫ → delete lines
8. ⌘ ⌥ R (rename) → rename variable

👉 Do this **same sequence daily** → builds muscle memory fast

---

3. 🧼 Cleanup habit (2 mins)

After editing anything:

- ^ ⌥ O → optimize imports
- ⌥ ⌘ L → reformat

👉 Make this **automatic at the end of every change**

---

4. 🧠 "One new shortcut focus" (2–3 mins)

Pick **1 shortcut per day** and overuse it:

Example:

- Day 1 → ⌥ ⏎ (use it constantly)
- Day 2 → ⌘ N
- Day 3 → ⌘ ⌥ ← / →

👉 Don't try to master all at once

---

5. 🚫 Constraint rule (all day)

Force this rule while coding:

> "If I know a shortcut exists → I must use it"

No mouse fallback.

⚡ Memory hack (important)

Group them mentally:

- **Navigation** → ⇧⇧, ⌘⌥← →
- **Editing** → ⌘D, ⌘⌫, ⌥⇧
- **Fixing** → ⌥⏎
- **Cleanup** → ^⌥O, ⌥⌘L
- **Run** → ⇧^R

👉 Brain remembers **clusters, not lists**

⏱️ Timeline (realistic)

- Day 1–2 → feels slow
- Day 3–5 → starts automatic
- Week 2 → you stop thinking

If you want, I can turn this into a **1-page printable cheat sheet (visual layout for TDD sessions)**.
